

The Noptel IRM program improves shooting training

The ultimate goal of the military shooting training is to produce fighters who are able to hit the target with every shot in any combat situation. The precondition for training field shooting skills is that the shooter should have adequate basic marksmanship skills.

Shooting

- indoors and out of doors
- day and night
- standing and moving targets
- simulated or real shooting distances
- dry fire, recoil effect or blanks

Analysis

- immediate feedback on hold, aim and trigger control
- evaluation of shots and shooting sessions
- recording and replay of shots
- comparison of trainees

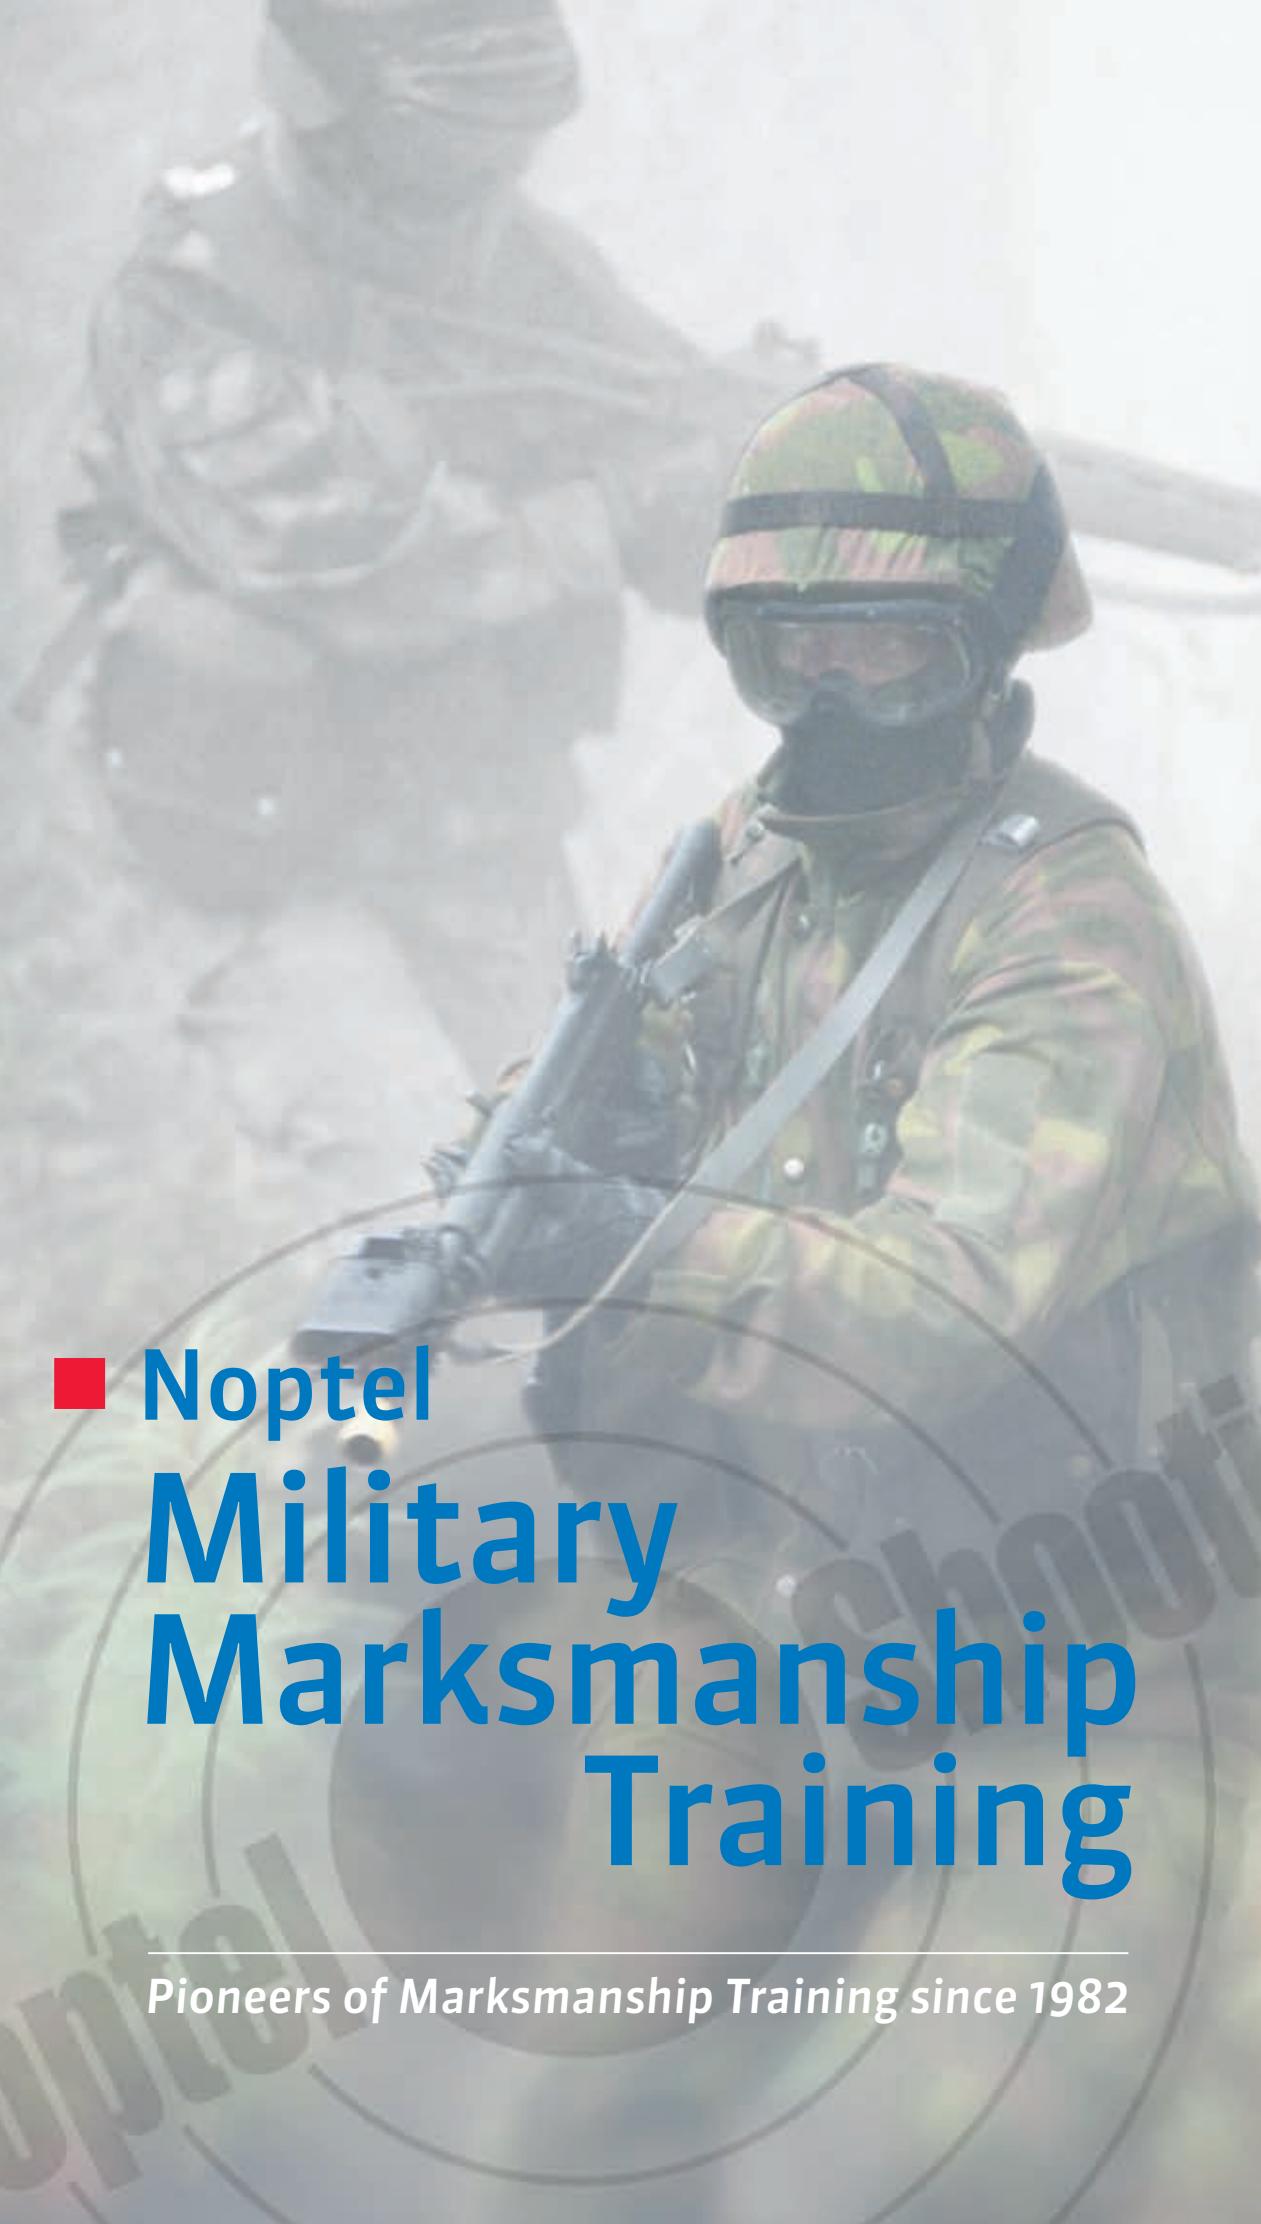

Results

- learning correct shooting techniques
 > better hit probability in combat
- increased training motivation
- better self confidence

Advantages over conventional methods

- more efficient training
- cost savings
- time savings
- environmentally friendly

Noptel – When results matter!

Noptel makes the difference in realistic training

Safe

The Noptel IRM Program adapts to customer's live fire training practises and makes the training safe.

Efficient

The Noptel IRM Program allows a lot of practice without ammunition costs and leads to better results quickly.

Easy to use

The Noptel IRM Program can be used and understood by any shooting instructor in any organization.

Noptel

Noptel Training Program for Military Use

Noptel was the first company to introduce an optical training system for everyday use. Since 1982 we have supplied more than 10 000 units to more than 60 countries. Noptel offers the latest technology and a comprehensive training program based on years of experience with military users.

The Noptel Training Program is based on our own measurement technology, innovative shot analysis and a high-class customer service. The Noptel Program helps instructors to train recruits safely and efficiently to become skilled shooters within a short time and in demanding training environments affected by a lack of time and difficult access to shooting ranges.

The Noptel Training Program allows you to use your own conventional or scaled targets, which do not require any electronics or wiring. You can use also conventional pop-up or moving targets. The training scenarios and level of difficulty can easily be varied in the field.

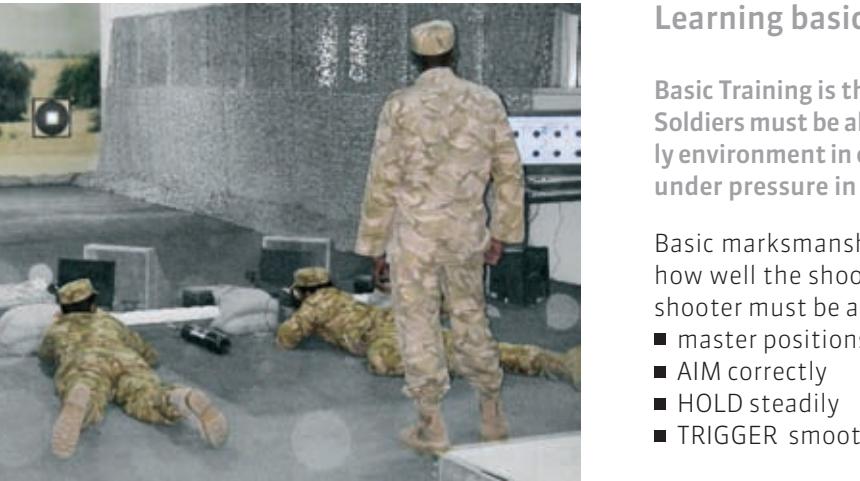

The three-phase Noptel Integrated Rifle Marksmanship (IRM) Program takes into account the important factors behind successful military marksmanship instruction. Safe training and live fire alternate in an optimal way, resulting in an efficient and motivating course for both trainees and trainers. The number of training sessions in each step can be varied according to local requirements.

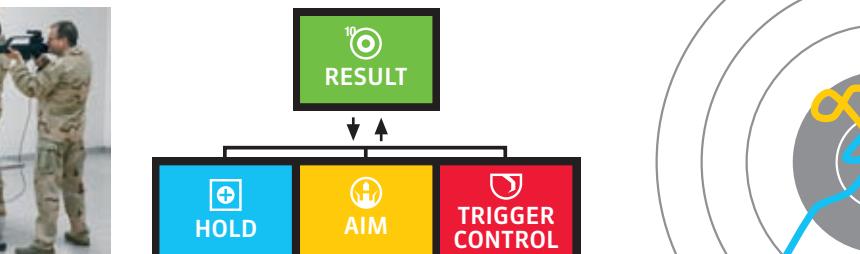

Progressive Marksmanship Training

Basic Training

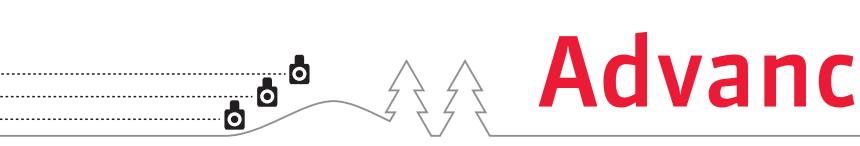

A classroom can be equipped according to the customer's own requirements.

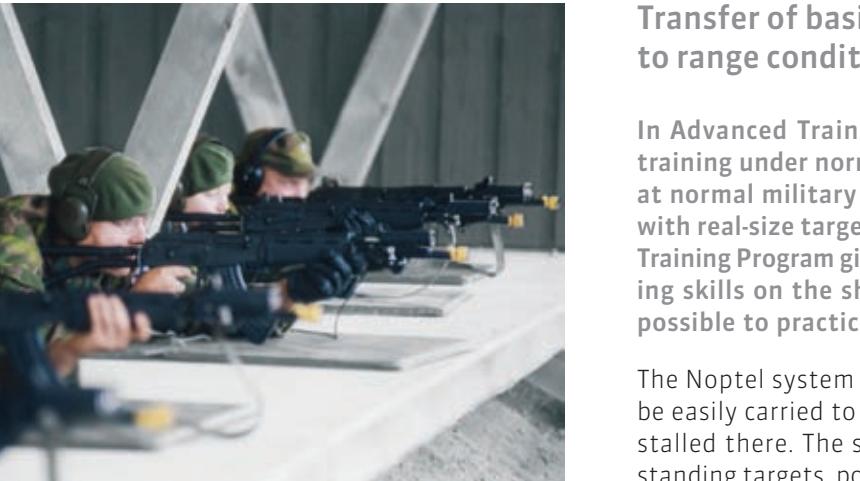

The result is based on three main factors.

READY FOR LIVE FIRE EXERCISES
AND ADVANCED TRAINING

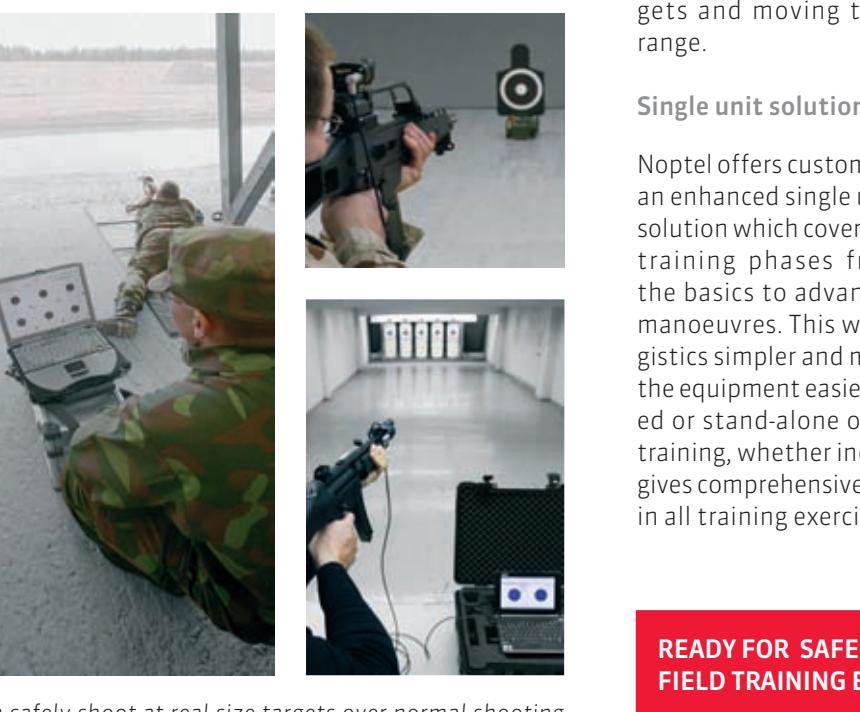

Advanced Training

Transfer of basic shooting skills
to range conditions

In Advanced Training the shooter will be training under normal shooting conditions at normal military shooting distances and with real-size targets. The Noptel Shooting Training Program gives a shortcut to improving skills on the shooting range. It is also possible to practice night shooting safely.

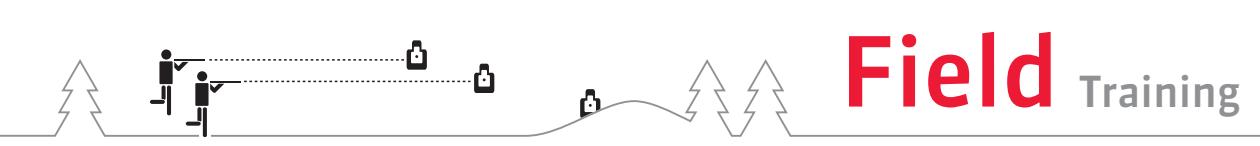

The Noptel system is fully portable and can be easily carried to a shooting range and installed there. The shooter can use real-size standing targets, pop-up targets, turning targets and moving targets on the shooting range.

Single unit solution

Noptel offers customers an enhanced single unit solution which covers all training phases from the basics to advanced manoeuvres. This will make the logistics simpler and management of the equipment easier. The unit allows connected or stand-alone operation in all phases of training, whether indoors or out of doors, and gives comprehensive information on the shots in all training exercises.

READY FOR SAFE
FIELD TRAINING EXERCISES

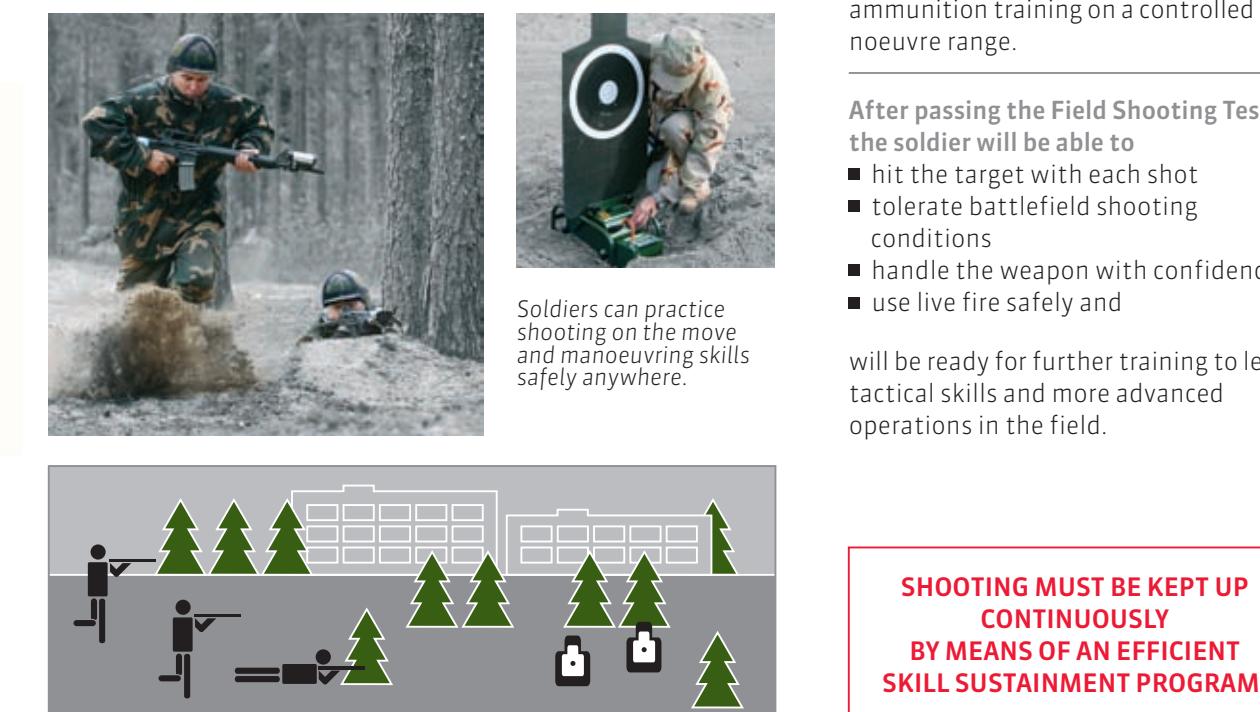

Field Training

Drilling field shooting skills

In Field Training either a single soldier or a buddy pair can train using pop-up or moving targets in a realistic environment. These safe training exercises allow other trainees to observe nearby and learn by seeing. The exercises use varying military shooting scenarios.

The training is safe. It doesn't require live fire safety precautions and can thus be arranged anywhere, even in the garrison area. After these safe situational training exercises the soldier will be ready for live ammunition training on a controlled manoeuvre range.

After passing the Field Shooting Test the soldier will be able to

- hit the target with each shot
- tolerate battlefield shooting conditions
- handle the weapon with confidence
- use live fire safely and

will be ready for further training to learn tactical skills and more advanced operations in the field.

**SHOOTING MUST BE KEPT UP
CONTINUOUSLY
BY MEANS OF AN EFFICIENT
SKILL SUSTAINMENT PROGRAM!**
